**Bearing device.**

Bearing sleeves 1c and 6c of dynamic pressure bearings 1 and 6 are adjustably supported to mounting sleeves 1a and 6a by appropriately flexible connecting portions 1b and 6b, so that the center axes of the bearing sleeves 1c and 6c are fine adjusted so as to coincide with the center axis of the shaft 3. Thus the concentricity of the bearing sleeves 1c and 6c with respect to the shaft 3 can be enhanced without requiring any high-precision machining.
