(54) **A shelf-carrying structure with the possibility of varying the levels for wall units, shelves and cupboards.**

(57) The shelf-carrying structure according to the present invention allows to exploit the high spaces in ambients in which there are wall units, shelves and cupboards, by means of two carrying means each one comprising two levers (L1) and (L2), each of said levers having a fix lower fulcrum and a movable upper fulcrum contained in a vertical plane, said levers being connected to a frame with planes parallel to the ground and vertical to the sides of said piece of furniture, so that said levers, rotating on fix fulcrums and keeping always parallel and aligned, move said shelves in the space without changing their traces, with interaxial distances between the constant fulcrums.
