(57) A medium processing apparatus for reading first information on a first medium and second information representative of a balance level on a second mediums, the apparatus comprises a device (18) for simultaneously receiving and returning the first medium and the second medium, a device (27) for transporting the first medium and the second medium received the receiving and returning device (18), a device (22) for reading the first information and the second information on the first and second mediums transported by the transporting device (27), control device (70) for calculating a value level in response to the first information and reducing the

balance level in response to the value level calculated by the control device (70), device (38) for recording the reduced the balance level reduced by the control device (70) on the second medium, device (20) for accumulating the first medium and the second medium recorded by the recording device (38), and device (24) for regulating the transporting device to transport the first medium and the second medium to the reading device separately and allowing the first medium and second medium accumulated by the accumulating device (20) simultaneously returning to the receiving and returning device (18).
