54 **Twin washbasin.**

57 A twin washbasin is a washbasin divided by an integrally formed partition (13) into two basins (11,12) one of which is mainly for mouth wash (11) while the other (12) is mainly for face wash. Both washbasins share one faucet (14) and one vent which is connected to drainage of the two basins.

F I G. 1

EP 0 613 984 A1

Field of the Invention

This invention is related to a twin washbasin. More particularly, a washbasin separated by an integrally partition-into two basins which are designed for mouth and face washes, respectively.

Background of the Invention

The prior art of a washbasin is generally made for mouth and face washes in one lavatory which is not easy to keep it clean, especially after mouth wash. Some people, when they wash their face, will keep water flush and use their hands to hold water to wash their face. This may avoid any bacteria attached on the basin to them.

The inventor has therefore invented the present invention which separate the washbasin into two basins for mouth and face washes at different basin.

SUMMARY OF THE INVENTION

It is the primary object of the present invention to provide a twin washbasin which has two basins one for mouth wash and the other for face wash.

It is another object of the present invention to provide a twin washbasin which complies with sanitary requirement.

It is still another object of the present invention to provide a twin washbasin which allows two people to do their fresh up at the same time.

It is a further object of the present invention to provide a twin basin which is inexpensive to manufacture.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 is a perspective view of the present invention;

FIG. 2 is a top view of the present invention ; and

FIG. 3 is a cross-sectional view of the present invention.

DETAILED DESCRIPTION

Referring now to the drawings wherein the showings are for the purpose of illustrating an embodiment of the invention only and not for the purpose of limiting the same, FIG. 1 shows the washbasin 1 supported by a stand 2, divided by a partition 13 into two basins, a mouth wash basin 11 and a face wash basin 12. Each basin 11, 12 has an individual drainage 111, 121 and are joint at the end of the two drainages and connected to vent 21 of the stand 2.

The drainage 111 of the mouth wash basin 11 is better grilled to filter larger objects and allows only water and smaller objects passing through. The drainage 121 of the face wash basin 12 has a stopper so that user may storage water inside.

A faucet 14 is rotatable mounted to the twin washbasin in such a manner that both basins 11, 12 share the faucet 14.

Claims

1. A twin washbasin comprising a mouth washbasin and a face washbasin separated by an integrally formed partition, each said washbasin having an individual drainage and been joint together at opposite end of both drainages and connected to a vent for water outlet.
