(54) **Coin packaging apparatus and system for managing the coin packaging apparatus.**

(57) A coin packaging apparatus is capable of saving the labor of operations for modifying coin data and totally managing coin data operating data. The coin packaging apparatus has a memory card driver (146) for reading and writing the coin data and writing the operating data in a memory card and a control unit (132) for calculating a passage width and height of a coin passage and a inner diameter of a coin accumulating unit by use of the coin data read from the memory card driver. The coin packaging apparatus also has a kind-of-coin designating unit (134) for designating a kind of coin to be processed, a coin passage width adjusting unit (141) for adjusting the passage width in a non-stage manner, a coin passage height adjusting unit (142) for adjusting the coin passage in the non-stage manner and a coin accumulating unit inner diameter adjusting unit (143) for adjusting the inner diameter of the coin accumulating unit in the non-stage manner. The system for managing the coin packaging apparatus has the above-mentioned coin packaging apparatus and a data recording unit (170) including an external data medium driving unit (171) and control unit (172) therefor.
