I-20159 Milano (IT)(54) **Feeding and supporting device for electric components.**

(57) The described device comprises a supporting element (5) defining a plurality of housings (9) in which respective microlamps (6) can be inserted. The thread-like terminals (6a) of each microlamp (6) abut on an inclined bottom wall (10) so that they cross an outlet slot (12) and each of them engages in an auxiliary slot (17) communicating with a coupling seat (14) in which an electric resistor (7) is subsequently engaged by forced fitting. The supporting element (5) is coupled by snug fitting with a small board (2) carrying connecting conductors (3) consisting of elastic small plates each acting on one of the resistors for urging it in contact with the respective thread-like terminal (6a).
