(54) **A modular wall chamber for sliding doors.**

(57) The invention relates to a modular wall chamber for sliding doors (2) comprising flanks (10) constituted by fretted metal panels (3) arranged in succession and interconnected by means of connecting joints (4) made on adjacent edges (51, 52) of the panels (3). The edges (51, 52) are complementarily

shaped so as to be associable by reciprocal superposing with a movement which is transversal to the lie plane (9) of the panels (3), thus connecting one to another by elastic snap-fitting and subsequent geometrical interference in a parallel direction to the lie plane (9) of the panels (3).
