(54) **Hinge.**

(57) A hinge comprises a casing member (1) and a frame member (3, 4) interconnected by means of a pivot (7), said frame member (3, 4) comprising a lower part (3) secured to the door or window frame (5) by means of mounting means, and an upper part (4) secured to the lower part (3) and covering said mounting means.

In order to efficiently ensure the above securing of the upper part (4), said upper part (4) can be inserted in or surround the lower part (3) as said parts tightly fit in one another. The pivot (7) retains the upper part (4) in a position in which it is locked to the lower part (3) because in the completely mounted position said pivot extends through flushing mating openings (6) in these two parts (3, 4).
