(54) **A fume and vapour removal setup**

(57) The setup comprises a succession of pipe lengths (10), (11), (12), (13), (14), (15) connected with each other in order to form the general structure of a fume and vapour piping. The passage cross-section of the different pipe lengths remains approximately constant all along the piping and is equivalent to that of the outlet of the fume and vapour hood or exhaust device (18). Terminal (20) which is coaxial to the outlet and provided with a grating, includes means to facilitate during the operation of said fume and vapour hood or exhaust device (18) a free passage of the fumes or vapours through the outlet end of the piping. Pipe lengths, including the bends, consist in sensibly flattened elements one of whose walls (21) is flat and apt to rest on a flat surface whereas at least another of their walls (22) is bulged towards the outside.
