(54) **An adult friendly child-resistant package**

(57) The present invention relates to a child resistant package. The child resistant package (100) according to the present invention can be readily opened by an adult with a one-hand operation. The pushtab (123, 123'), which together with the interlocking tooth (119) form the child resistant feature of the package of the present invention, is placed on the closure (120). Therefore, an adult user may easily depress said pushtab and at the same time disengage said closure to open said package by using only one hand for both operations.
