(54) **Cot**

(57) The present invention relates to a child's bed whose bed or cot bottom is easy to adjust vertically. This is made possible by the manner in which the bed bottom is supported vertically with the aid of supporting means (4). The supporting means (4) comprise elongated support means which are equipped with hand grips and

which are throughgoing in relation to the ends (20) of the bed and which are arranged in elongated vertical openings (21), which are provided with engagement side-recesses (22). Catch means secure the engagement between the respective support means and recesses. A special rotation of the support means is required for loosening the engagement.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 97 85 0125

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
