(54) **Mounting structure and mounting method for mounting window panel on window frame of vehicle body**

(57) A mounting structure for mounting a window panel (11) on a window frame (2) of a vehicle body including a fastener provided on the rear surface of the window panel (11), the fastener (13) having a groove (16) engageable with a flange of the window frame and having a removed section formed between opposed end surfaces thereof, and a spacer (17) provided on the flange (4) of the window frame (2) and positioned to correspond to the removed section of the fastener (13), the spacer (17) having opposed end surfaces which may

engage the end surfaces of the fastener. The end surfaces of the spacer (17) and the end surfaces of the fastener are preferably shaped such that the end surfaces of the spacer engage the end surfaces of the fastener to prevent the spacer from dropping out of the removed section of the fastener (13) when the window panel is mounted on the window frame by engaging the groove of the fastener with the flange of the window frame, with the spacer received in the removed section of the fastener.
