(54) **Device to attach an object like a watch to the wrist, particularly to an in-line-skater handprotector**

(57) The invention relates to a device (1) provided in the shape of an elongated belt for attaching an object like a watch to the wrist, in particular to an in-line-skater handprotector (20) of a user. The device (1) consisting of bottom and upper material layer (7, 6a, 6b, 2) is designed so that a watch can be inserted with its wrist traps in pockets which are formed between those material layers so that the watch is held safe and cannot be lost. The device (1) can be removeably fixed, e.g. to a

closing tongue (4) of the handprotector (20) by means of velcro parts. Alternatively, the device can be fixed tightly, i.e. stitched to the handprotector (20). The device accomodates to different diameters of a wrist or different sizes of the handprotector (20) by means of a rubber-elastic stretchable fastening section (10) which can be stretched in length direction of the device.
