(54) **Editorial products container with self-adjustable floor**

(57) An editorial products container with self-adjustable floor consisting of an upwardly open (at 14) box-like containing element (11) comprising within its interior a flat resting element (16) downwardly and upwardly movable on support elements (18, 20) which can be variably positioned and are at least partially secured to the containing element, there being provided at least one reaction element (24, 124) which determines the

position in height and the controlled descent of the flat resting element (16), which when unloaded is in its raised position and when under maximum load is in its completely lowered position within the containing element. In this manner the loading and unloading surface for the products (29) is always maintained in proximity to a mouth (14) of the container (11).
