(54) **House unit, and contruction of house unit frame**

(57) Provided is a house unit (200) that can be easily disassembled and easily reerected as a different construction, and that can provide adequate security for the original construction and for the reerected construction.

According to the present invention, as the side faces of a rectangular parallelepiped frame construction (111) can be selectively bonded to another frame construction (113) or external wall panels (145,155,161,168), expansion or rebuilding can be facilitated. Since the external wall panels (141,143,145,155,161,163,165,167,169) can be easily removed without damaging the essential components of the construction of the frame (111,113) or of the external wall panels (141,143,145,155,161,163,165,167,169), the removed external wall panels can be used again. In addition, since the external wall panels (141,143,145,155,161,163,165,167,169) can be removed only from inside the frame construction (111,113), the house unit (100) assembly can provide a high level of security.
