(54) **Foldable chair having rear legs rotatable about a coaxial column**

(57) Foldable chair consisting of a frame (10) comprising two pairs of uprights (11,12) forming the front and rear legs of the chair, each upright (11) of the associated pair being connected to the other one (12) by an associated cross-piece (13), the seat (3) being hinged, via associated means (20), to the rear uprights (11), in which the said rear uprights (11) are extended upwards by means of respective columns (15) for supporting the backrest (2), characterized in that said rear uprights (11) are connected to the respective column (15) arranged above via associated coaxial means (14) designed to allow rotation of the upright (11) relative to the column (15) so as to obtain folding of the chair.
