(54) **Improved mechanical container for barshaped products**

(57) The invention proposes a mechanical container (1) for products shaped in the form of a bar (5), the container body and/or the closing cap (6) incorporating respective nerves which adapt onto one another and secure the cap in the closed position of the container and thus provide a means of attachment for the two parts. Furthermore, one of the parts, either the body or the cap, is fitted with an attachment groove (13) for receiving a nerve or projection (11) emerging from the other body.
