(54) **Roller Shutter**

(57) This invention relates to an assembly of a roller shutter (1) and a locking, whereby the roller shutter (1) can be rolled up and down between an open and a closed position, and the locking is provided for locking the roller shutter (1) in the closed position, which locking comprises a bolt (6), which is movable between a locked and an unlocked position, whereby the locking comprises a bolt which is provided to be movable into and out of a perforation (7) provided in the roller shutter (1), by means of a controllable drive mechanism (3), which drive mechanism (3) is provided for exerting an authorised force to the bolt (6) for the movement of the bolt between the locked and unlocked position, which drive mechanism (3) is connected to means for neutralising an external, unauthorised unlocking force exerted on the bolt (6).
