(54) **Antislip edge for step corners and similar elements**

(57) The invention is a new profile (A) provided with lower recesses in which fastening brackets are inserted, said fastening brackets being positioned under the profile (A) and under the covering (R) laid beside said profile.

Each bracket is provided with vertical elements with projecting parts, so that it can perfectly fit into the corresponding lower recesses present on the profile (A). The brackets (S) are produced in different sizes and are differentiated only by the height of the ribs with respect to

the support surface of the bracket (S) itself, so that the height of the profile (A) with respect to the support surface is modified. It is possible to produce profiles with antislip edges in different sizes, wide or narrow, and to produce different brackets that can be applied to both profiles and are provided with ribs having different heights, so that they can be adapted to tiles having different thicknesses.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 98 11 1807

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
