### (54) Lock

(57) A lock comprises a body (2), a bolt member (10, 40) mounted for movement relative to the body (2), a drive means (8) and a link means (10d, 14, 42). The link means (10d, 14, 42) comprises a first member (14) slidable relative to the body (2) which is engageable with the drive means (8) for movement thereby. A second member (10d, 42), moveable about a pivot mounting (22), is driveably connected with the bolt member (10, 40) and the first member (10d) is coupled to the second member (14, 42) at a position between the pivot mounting (22) and the bolt member (10, 40), such that in use, activation of the drive means (8) causes movement of the first member (10d) which in turn produces a relatively larger movement of the bolt member (10, 40).

ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.

EP 98 30 5621

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
