(54) **Closure device for sliding leaves**

(57) A closure device for a sliding leaf, comprising a cremone-bolt actuation system provided with at least one traction element (28) for actuating a respective rod (10) which is slidingly guided in a seat of the front edge of the leaf and is provided with at least one engagement element (11), the cremone-bolt actuation system being suitable to actuate the engagement of the engagement element (11) in a respective slot (18) of an abutment post (19) of the front edge, the device further comprising a block (29) which is connected to the rod (10) and

having an engagement seat for the traction element (28) and a contrast element (40) which is actuated by elastic means (41) against the traction element (28) in order to elastically retain the traction element in the seat, the seat being shaped so as to allow movements of the block (29) with respect to the traction element (28) when the rod (10) is actuated in contrast with the elastic means (41).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 98 11 3204

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
