(54) **A rolling door and a frame profile therefore**

(57) The invention provides a rolling door for mounting in connection with a door opening (5) in a wall, e.g. in a storehouse, a cold store or the like, comprising two frame posts (1) for mounting at the sides of the door opening, a roller (2) arranged uppermost between the two frame posts (1), a door leaf (3) of a flexible material, preferably a curtain which is secured to the roller (2) at one end and is provided with a boom (4) at the other end, guide means (16, 21, 36) for guiding the boom (4) during rolling up and down of the door leaf (3) about the roller (2) to open and close the door, and hoisting means (6, 11-15, 22, 42) for rolling the door leaf (3) up and down, said guide and hoisting means (6, 11-16, 36, 42) being slidably arranged in their respective slide tracks (21, 22) in a frame profile (10), which exhibits a mounting face (29) for the frame profile (10) on the opposite side of the slide tracks (21, 22) disposed in parallel. Also a frame profile (10) therefor is provided. The resulting rolling door is extremely compact and therefore just requires relatively modest installation space, just as the rolling door of the invention is comparatively noiseless in operation and is not very costly in operation and manufacture.
