(54) **Jacking device**

(57) A jacking device 1 is disclosed which comprises a tubular member 2 adapted to be received in a first end of an aperture through a door frame or window frame, and having a threaded internal surface and an elongate head portion 8 having screw holes 9. A jacking device 1 also comprises a jacking member 3 having a threaded external surface adapted to be received in the tubular member 2 and to engage the threaded internal surface of the tubular member, and a head portion 18

for engaging a wall surrounding the door frame and/or window frame. The jacking member 3 is adapted to be engaged in use by the interior of the tubular member 2 from a second end of the aperture in the door frame or window frame to rotate the jacking member 3 relative to the tubular member 2 to cause axial relative movement between said members to bring the head portion 18 into engagement with the wall.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 98 30 9463

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
