(54) **Transfer pump**

(57) A transfer pump for use with a high pressure pump having a rotary drive member (10) and a stationary part (16), comprises a plurality of pumping elements (26) reciprocable within bores (24) provided in the drive member (10), the bores (24) extending generally parallel to the axis of rotation of the drive member (10), the pumping elements (26) being reciprocable under the

influence of a cam surface (28) defined by a surface of the stationary part (16) of the high pressure pump, the pumping elements (26) being biased towards the cam surface (28), and valve means associated with the bores (24) controlling the flow of the fuel to and from the bores (24).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 98 31 0488

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
