(54) **Arrangement for fastening an accessory device onto a fork-lift truck**

(57) The invention concerns an arrangement for fastening of an accessory device onto a fork-lift truck, which is provided with lifting forks (4), which forks can be pivoted between a working position and an upright position, in which upright position the lifting forks (4) can be locked by means of a locking latch or equivalent. In view of fastening of the accessory device, the lifting forks (4) of the truck are pivoted to the vertical position and locked in their place. The fastening mechanism (10) of the accessory device is provided with a load-bearing peg (16) for each lifting fork (4), and each lifting fork (4) is provided with a through hole, into which the load-bearing peg (16) has been fitted to pass so as to support the accessory device. The fastening mechanism (10) is further provided with a back-up face (12) or equivalent, against which the lifting forks (4) rest when the accessory device has been fastened, as well as with locking means (14, 15) for locking of the fastening mechanism (10) on the lifting forks (4).

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 99 66 0041

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
