(54) **Device for regulating the directions and positions of a gunstock cheek-rest**

(57) This invention concerns a device for regulating the position of a cheek-rest for gunstocks, where the cheek-rest (12) consists of a movable element applied to the upper part (11) of the stock. The cheek-rest and stock body are connected by props (15) with a prismatic shape, anchored immovably to a first plate (13) fixed to the cheek-rest and inserted in corresponding guide slots, where they are blocked, in a second plate (14) fixed to the stock body. The first plate (13) can be positioned at right angles to the said props (15) to give a bilateral positioning of the cheek-rest above the stock body. The props can be adjusted in height and/or inclined in the guide slots (21) of the second plate in order to vary the height and/or angle of the cheek-rest above the stock body.
