(54) **Yarn splicing method for winding and winder**

(57) The present invention provides a yarn splicing method for a winder and a winder that can eliminate fluffs from the surface of a yarn joint. In a winder 1 having a splicing device 6 placed between a yarn supplying section 2 and a winding section 7, a yarn joint finishing device 10 comprising a liquid applying member 11 for applying a liquid to a yarn running path R and a fluff smoothing member 12 that comes in contact with the yarn running path R is provided in the splicing device 6 and its neighborhood. The liquid applying member 11 and fluff smoothing member 12 of the yarn joint finishing device 10 are integrated together using a contact surface member 13 that wets the liquid applying member and fluff smoothing member with a liquid. The yarn joint finishing device comprises two sets of the contact surface member 13, and the contact surface member 13 of each set can advance and withdraw between a standby position located away from the yarn running path R and a finished position at which the yarn running path R is sandwiched.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 99 12 0631

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
