#### (54) Device for keyless locking and unlocking of motor vehicle doors

(57) Described is a device for keyless locking and unlocking of motor vehicle doors, comprising a remote control with a transmitter, a control element located in the motor vehicle, said control element controlling the respective locking mechanism of the door, and a receiving aerial associated with the control element. In order to create such a device with a powerful receiving aerial for ultra high frequency signals, it is proposed that the receiving aerial (5) be arranged in at least one of the control stalks (6, 7) of the motor vehicle.

### ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 99 12 1640

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
