(54) **Display stand**

(57) The present invention relates to a display stand (1), especially of corrugated cardboard. The display stand 1 is characterised in that it comprises an elongated tubular part (2) with a front side, a back opposite the front side and two ends connecting the front side and the back respectively. Inside the tubular part connected to the inside of the back there is a part (3) displaceable in the longitudinal direction. There is also at least one shelf level (5), which is formed from the front side and which at its front edge is firmly connected to the front side by way of a score line (17) and at its rear edge is fastened to the displaceable part (3) arranged inside the tubular part. The displaceable part (3) can be fastened to the tubular part (2) in an upturned position so that the shelf level essentially extends at right angles between the front side and the back respectively of the tubular part and is displaceable into a folded-up position.
