(54) Adjustment mechanism on a seamer

(57) An adjustment mechanism for a round and irregular seamer useful in the manufacture of tins is disclosed. The seamer has a rotating usually circular plate sandwiched between stationary cam plates above the plate and a seaming chuck below the plate. A seaming assembly is rotationally mounted to the rotating plate proximate its periphery and is provided above the plate with a cam follower which interacts with the cam plate and beneath the plate with a seaming arm and head which moves towards and away from the seaming chuck depending on the interaction of the cam follower with the cam plate.

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
