(54) Cap having a lantern

(57) Disclosed is a cap having a lantern, which can emit light in a direction coinciding with a worker's line of vision without blocking the worker's visual field, and whose lighting direction can be adjusted, so that a worker can perform labor more easily and safely even in dark environment. The cap includes: at least a lighting section (100) disposed at a center portion of an upper surface of a visor (12); at least an electric power section (200) disposed at a cap body (11); electric power con-

nection means (310) for interconnecting the lighting section and the electric power section with each other; and switching means (17, 18) for switching on and off electric power applied to the lighting section. The lighting section can be pivoted between a first state, in which the lighting section is in parallel with the visor, and a second state, in which the lighting section is oriented downward. Therefore, a worker can perform his labor very easily and conveniently even in a dark environment.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 00 11 5025

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
