(72) Inventors:
• **Sako, Takaharu, c/o Denso Corporation
Kariya-city, Aichi pref., 448-8661 (JP)**

(54) **Connector with primary molded member and secondary molded member**

(57) In a connector with a primary molded member (50) and a secondary molded member (60), a distance (D) between the primary molded member and a die (70) is set before a filling of a secondary resin so that a melting protrusion (53) of the primary molded member is melted by a secondary resin having a predetermined temperature and a predetermined pressure during the filling of the secondary resin. Because a wall thickness of the secondary molded member around the primary

molded member is made approximately uniform, a flow rate of the secondary resin is increased. Further, the melting protrusion is disposed to partition electrical conductive members from each other, and is accurately sufficiently melted to improve fusion-bonding performance between the primary molded member and the secondary molded member. Accordingly, an electrical short circuit between the electrical conductive members is accurately prevented in the connector.

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 00 71 0023

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
