(54) **Mortise lock for mounting in a door or the like**

(57) Mortise lock for mounting in a door or the like, comprising a case (1) in which a bolt (2) is slidably received. A recess (9) in the bolt (2) holds a conveying element (10), which is slidable transverse to its direction of movement (V) and is under the action of a compression spring (11). Through the conveying element (10), the bolt can be moved by an actuating arm (20) being connected

with an inner cylinder (18), which is mounted in an outer cylinder (17) and can be rotated with the help of a key (19). The conveying element (10) has pins (13) being guided by slots (14) mounted in the case (1). On sliding the bolt (2) outwards, the actuating arm (20) will be released from the conveying element (10) and the latter will then press the bolt (2) further outwards by means of the compressing spring (11).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 00 20 3763

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
