(54) **Display device**

(57) The invention relates to a display device for displaying any kind of printed information or to be used also for displaying products at one or more shelves provided in the display device. The display device has the advantage that all that is needed for assembling the device and all that is needed for positioning the device in a display position is provided as an integral part of the plates constituting the display device. Accordingly there is no need for separate items needed for assembling the device. In a preferred embodiment the display device has an intermediate plate P1 and two curved display plates P2, P3 that is biased by a force being applied between engagement means of the plates. The plates may constitute one piece of material such as cardboard or a number of individual pieces to be mutually engaged by engagement means suitable for engaging the plates.
