(54) **Window construction and window section having an interrupted coldbridge**

(57) A window construction 1 has a window profile 5 made up of a unit with a first profile 9, a second profile 11 and an insulating joining piece 13. The joining piece 13 forms a break in the thermal bridge, which in the absence of the joining piece 13, would be formed by the first profile 9 and the second profile 11.

With known window constructions the joining piece is situated in the middle of the thickness of the pane as a result of which all the load on the pane is transmitted

by the joining piece.

In the window construction 1 according to the invention, the joining piece 13 is situated on the inner side of the pane 7. The pane 7 is fixed in the first profile 9, which is fastened to the wall 3, while the second profile 11 is situated completely on the inner side of the joining piece 13. Because of this, the load on the pane 7 is received by the first profile 9 and no forces are exerted on the joining piece 13.

FIG. 1
