(54) Packaging

(57) The present invention relates to a package comprising a one-piece blank whereby the side walls have support tabs (12) which project from them at both ends and which are delimited from the edge sections by means of a first fold indication (13), and whereby the support tabs (12), in a storage state, are located in the same plane as the raised first edge sections (2,3), as a result of which the packages, with their edge sections

diverging from the bottom section in this unfilled state, can be pressed down into each other for space-saving stacking of empty packages, and whereby the support tabs (12) are provided with locking portions (16) and, after the support tabs have been folded down to a support position in which each support tab (12) rests against an upper edge of the adjacent second edge section (4,5), said locking portions (16) are arranged to project completely outside said upper edge.
