(54) **Heat exchanger**

(57) The invention relates to a heat exchanger (1) provided with a series of first and a series of second fluid ducts that are in heat exchanging contact with each other, in which the ducts are bounded by circumferential walls comprising duct partitions (2) and duct side walls (5), in which the heat exchanger (1) is formed by means of folding substantially one metal plate into a packet of ducts having four sides, in which the duct side walls (5) form opposite first (a) and second sides (c) of the heat

exchanger (1) and every other one respectively is provided with first and second passages, respectively, for access to the ducts of the first and second series of ducts, respectively, and in which the first series of ducts is closed off at the third side (b) by means of folded down wall members (10) of the duct partitions (5) and is open at the fourth side (d) and the second series of ducts is closed off at the fourth side (d) by means of folded down wall members (10) of the duct partitions (5) and is open at the third side (b).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 01 20 0685

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
