(54) **Improved suspension device for laundry**

(57) The invention relates to a strong improved suspension device (1) for laundry or fabric items (2) on a clothesline (3), popularly called a strong improved clothes-peg, by which this is constructed of a clamping element (4), V-shape constructed of a springy flat threaded element (5), that on the ends is provided with an in cross-section enlarged clamping jaws (6) and

around this slid from underneath an in cross-section approximately elliptic locking ring (7) with profiled bottom surface (11), by which by means of rotation of the mentioned locking ring (7) on a surprisingly inventive way the laundry (2) as well as the clothesline (3) are clenched on the suspension device according to the invention.
