(54) **Child's plaything**

(57) 1. CHILD'S PLAYTHING, constituted by a set of plastic material parts assembled by means of nuts and screws of the same material, resulting in a considerably-sized doll able to be dismantled, in such a way that it has arms (1a) and hands (1b), joined together and extended in the shape of two side slides (1). The body of the doll is made up of front (3) and back (13) walls, joined together by two lateral crosspieces (12). Said

front (3) and back (13) walls have some grooves (3a) and (13a) along them, suitably arranged to facilitate climbing to the top of said walls. Provision has been made to assemble an access platform (14) to the mentioned side slides (1) on top of said crosspieces (12), on which the head (15) of the doll is coupled. This is also attached to the front wall (3) by means of projecting lugs (15a) that project out of both sides of the corresponding neck of the doll (Figure 13).
