(54) **Method to supply clear rinse in a dishwasher**

(57) The invention concerns a method for the dosed supply of clear rinse to the clear rinse bath in the tub of a dishwasher during the clear rinse cycle, whereby an optical sensor monitors the foam concentration of the clear rinse bath. An overdose of clear rinse is avoided during the clear rinse cycle according to the invention in that a setpoint is given for the foam concentration in the clear rinse bath for the dosed supply of clear rinse,

whereby the actual value of the foam concentration in the clear rinse bath measured by the optical sensor during the clear rinse cycle is compared with the given setpoint, and whereby clear rinse is supplied to the clear rinse bath continuously or at intervals until the measured actual value corresponds to the given setpoint.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 01 11 8818

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
