(54) Electrical connector

(57) An electrical connector for mating at least two circuits having a first (10) and second (11) insulating body adapted to mate with each other in completing an electrical circuit. The first body having a bottom portion and a top portion to connect to a first circuit and the second body having a bottom portion adapted to connect to a second circuit and a top portion to connect to the

first body. The first and second bodies having a plurality of adjacently spaced recesses (12,13) on their mating surfaces and sides and further having contact elements (14,15) located within the adjacently spaced recesses. Contact elements are pressed against each other when the first body and second body are joined in forming a connector.
