(54) **Built-in orientable lighting apparatus**

(57) A built-in orientable lighting apparatus (10), of the type comprises a containment body (14) which hosts a lamp bay (11), inside of which there is at least one light source (12). The lighting apparatus (10) foresees means for realising the internal and external orientability of the lamp bay (11) with respect to the plane of the surface (15) to which the lighting apparatus is applied, in

such a way that the lamp bay (11) can move, reversibly, from a first maximum operating position, in which the lamp bay (11) forms a first internal angle (α) with the plane of the surface (15) to which the aforementioned lighting apparatus (10) is applied, to a second maximum operating position where the lamp bay (11) forms a second external angle (β) with the surface (15).
