(54) **Mechanical junction assembly for perimetrical locking device of wings of burglarproof doors and windows made of metallic profiles**

(57) A mechanical junction assembly between a coupling or transmission member (105) and a rod (107) for driving a perimetrical locking device of a wing of an burglarproof door or window. The coupling or transmission member is formed with an end tongue (111) overlapping the rod (107) and a lug (109) projecting from the tongue (111) for engaging with a hole (110) formed on the rod (107). The junction assembly comprises connection means (113) engaging with the rod (107) and the coupling or transmission member (105) at the side opposite to the overlapping side, whereby, even if the tongue (111) would be deformed and, as a result, the relevant lug (109) would be disengaged, the member (105) and the driving rod (107) are kept connected to each other, the connection means (113) being kept inaccessible below the member (105) and the rod (107).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 01 83 0626

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
