(54) **Complements for slide locks which are activated by means of a square bar**

(57) The complements for slide locks which are activated by means of a square bar couple directly onto the handle's shield (1), mounting onto it without allowance for play.

The complement used for non-blocking locks has a characteristic teardrop shape with elements and rims distributed around its periphery and a central circular opening (12), while the one used for blocking locks has a characteristic teardrop shape with elements and rims distributed around its periphery and a central circular opening and also having a lower tongue that incorporates its corresponding stubs and a smaller circular opening than the previously mentioned one into which the blocking actuator mechanism is inserted. This last complement consists of a laminated body (9) which incorporates various projections that couple to the shield and various strips that act as the stopper stub of the lock's moving nucleus.
