(54) **A bricklaying method and an arrangement for the implementation thereof**

(57) Method for manufacturing a wall element (1) of bricks, blocks or the like masonry pieces (2,2a,2c) wherein mortar or the like binding material (4) is arranged between the essentially parallelepiped-shaped masonry pieces (2,2a,2c) in order to establish a monolithic construction, wherein said element (1) is assembled on a bearing structure. The lowermost structure (3) of the element is arranged per se so that it integrally with the other parts of the element constitutes the bearing structure of the element. Element (1) assembled by masonry of bricks, blocks or the like essentially parallelepiped-shaped masonry pieces (2,2a,2c) whereby the lowermost portion of the element (1) is arranged to constitute a strong unitary portion (3) of the structure distributing the forces directed against it towards the upper portions of the element.

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 02 00 3314

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
