(54) **Electrical conductor connector**

(57) The invention relates to a connector for at least one electrical conductor end in the form of an electrical cable. The connector comprises a body with at least one port for the reception of a conductor end, a collet which fits around the conductor and clamping means which in one embodiment are threaded and engage with a threaded portion at the port opening. With the collet and conductor placed in the port, rotation of the clamping

means moves the collet inwardly of the port, the internal walls of which are frustoconically shaped. The collet moves into the port until a location at which further movement of the clamping means causes at least a portion of the collet to move inwardly and exert a gripping force on the conductor and, in conjunction with the clamping means securing the conductor in the connector.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 02 25 1330

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
