(54) **Securing member for a supporting arm movable within a vertical guide**

(57) The invention relates to an assembly having a vertical guide comprising a base part provided with spaced-apart holes, raised edge portions and legs turned towards each other on said edge portions, supporting arms movable within said vertical guide and securing members by which said supporting arms can be

secured within the vertical guide. Said securing members can be placed in the holes with a stub and will come to bear against the inner side of the guide with their cams by rotation, in which a supporting arm will come to bear on said securing member through an obliquely extending contact surface.
