(54) **Broom with reservoir and means for regulating the outflow of cleaning and floors treatment products**

(57) This patent is about an improved controlling system for the regulation of the going out of cleaning and floors treatment products from the tank applied on the brooms. The driving of the aforesaid controlling system is carried out by means of a lever hand (16) which is like those lever hands for the brakes control applied on the bicycles' handlebar. In comparison with the already existing controlling system, the present one is characterized by the fact that it is placed on an intermediary step of the broom's handle (2) instead of being placed at the top.
