(54) **House and method of constructing the same**

(57) The invention relates to a house composed of building units, each of which is composed of a basic frame, fastened to which is at least one of a floor element, a ceiling element and a wall element, as well as means for fastening several building units to one another, and of which a bottom building unit comprises means

for resting on a foundation. This makes it possible to very quickly and simply assemble a house. The invention also relates to a method of constructing a house comprising the steps of at a first location fabricating building units, and at a second location connecting the same with each other. In this way it is possible to build a house on a building site in one day.
