(54) **Modular fence**

(57) Modular fence comprising a plurality of supporting uprights (2), and a plurality of modules (3) with mainly planar development able to be mounted between two successive uprights (2). Each module has two cross members (4) and a plurality of delimiting bars (7) pivotally associated to the uprights (4) according to first axes of rotation, mutually parallel and perpendicular to the main plane of development of the module (3) itself. Each cross member (4) has a first end (5) able to be pivotally associated to a first supporting upright (2), and a second

end (6) able to be pivotally associated to a second supporting upright (2). Each cross member (4) can be pivotally associated to the first and to the second upright (2) according to third axes of rotation, parallel to the first axes of rotation and coinciding with the axis of rotation according to which the cross member (4) of the adjacent module (3) can be associated to the same upright (2). Each upright (2) comprises a lower support base (8) and an upper connecting rod (9) hinged to the lower support base (8) according to a second axis of rotation, parallel to the first axes of rotation.
